

NeuroLifeNow

November-December 2022 report

Brain & Spine
Foundation

THE
NEUROLOGICAL
ALLIANCE

Foreword

This winter has undoubtedly been one of the hardest ever for thousands of people affected by neurological conditions across the UK. Last year, you told us how you didn't feel listened to by Government, and that health, care and financial support just weren't available. We asked you at the end of 2022 to tell us how the UK Government could show it was listening - the message was clear - grow and support our health and care workforce, make sure financial support works for people affected by neurological conditions and invest in much needed research.

The UK Government has an unprecedented opportunity to show it is listening to you by ensuring targeted support is available this winter and beyond. It is clear from your responses to the latest NeuroLifeNow questionnaire, that this has never been more needed.

“Stop making the benefit system so adversarial & complicated.”

“Education for benefit assessors so we are not constantly made to go through court type hearings after PIP assessors have got so many factors wrong in an assessment. This is truly detrimental to our well being - mental and physical.”

The UK Government have uprated many disability benefits in line with inflation. However, this will only come into force in April 2023, leaving many without the support they need now. We, together with charities across the country, have called on the UK Government to provide urgent financial support to people affected by long term conditions.

Of course, many healthcare professionals have been on strike over the winter period, and this looks set to continue in the months ahead. We are increasingly concerned that people with neurological conditions are experiencing cancellations and delays to their care as the strikes continue. Clearly an agreement must be reached, to ensure we are able to retain and grow the health and care workforce now and in the future, and much needed care can continue.

If you need to talk, you can speak to a neuroscience nurse for free by calling **0808 808 1000** (Mon-Fri, 9am - 4pm) or email helpline@brainandspine.org.uk. Thank you so much.

Marc Smith, CEO Brain and Spine Foundation
Georgina Carr, CEO Neurological Alliance (England)

Background

There are more people in the UK living with a neurological condition than cancer, heart disease or diabetes. Change is needed urgently because the current system is under-funded, inadequately resourced, and fails individuals and families too often. NeuroLifeNow is a platform designed to support people with neurological conditions to share experiences of their care. Insights are shared with NHS Commissioners, UK Governments and clinicians to influence how neurological services are delivered and to drive positive change. The data in this report is derived from responses received between 1 November – 31 December 2022.

Key findings

- 248 people shared their experiences in November and December, with 72% female respondents and 27% male.
- 83 different postcode areas were represented in November and December.
- Restless Leg Syndrome, Functional Neurological Disorder (FND) and migraine were the top three neurological conditions to be cited in November and December. 72 different neurological conditions and symptoms were represented in the survey. A total of 139 respondents, equating to 56% of respondents, indicated that they have multiple (i.e. more than one) neurological conditions.
- We asked you how the new UK Government could show it was listening to people affected by neurological conditions – most commonly you asked for an improved healthcare system and access to professionals, more research, improved financial and social support and increased recognition of neurological conditions.
- 69% interacted with health or care services in November and December. 30% of those who had a health or care appointment found it unhelpful. 47% of appointments reported were with a GP. Speech and language therapists, specialist nurses and physiotherapists were felt to be the most helpful.
- 31% said their experience of healthcare was good or very good, whilst 35% said it was poor or very poor. Those feeling anxious and/or hopeless were more likely to report poor or very poor experience.
- The proportion of appointments being delivered remotely has decreased compared to previous months of NeuroLifeNow – just 57 appointments were delivered by phone, videoconference or text/Whatsapp. However, all videoconference appointments (n=6) were felt to be helpful. 45% of phone appointments were considered unhelpful.
- More than two thirds (68%) said they felt anxious or hopeless.

You were asked how the UK Government could show it is committed to improving the lives of people affected by neurological conditions. A word cloud is generated to visualise the key words that you used.

[illegible]

Thematic analysis

- **Theme 1: Improve the healthcare system**
 - Clear clinical pathway
 - Good access to healthcare

- Education for health professionals
 - Update outdated guidelines
 - Increase number of healthcare professionals
 - More funding and investment
- **Theme 2: More research**
- **Theme 3: Provide support**
 - Financial support
 - Social, medical, and other support
- **Theme 4: Recognise neurological conditions**
 - Raise awareness about neurological conditions
 - Listen to people with lived experiences
 - Recognise Restless Leg Syndrome (RLS)

Theme 1: Improve the healthcare system

Clear clinical pathway

You wanted to have a clear clinical pathway for diagnosis and treatment. This includes making it easier for doctors to make referrals, having a neurohub pathway, adopting a holistic approach, and having better communication between healthcare providers. We've captured your responses below:

"Create clear pathways for diagnosis of FND..."

"...a swifter referral to a neurologist"

"Improving follow up care , a neuro hub pathway where you can be assessed through your GP practice and get access to discussing your symptoms, fears and progressive symptoms to."

"Connect various healthcare departments. The system is complex and does not cater for people with complex health issues"

"Finding a way that patients, especially older patients, don't get lost in the system."

"Better communication between healthcare providers could improve the lives of the people living with neurological conditions and those who are caring for them"

Better access to healthcare

You wanted to have easier, better and quicker access to healthcare. This includes better access to specialists, medications, scans, face-to-face appointments, routine check-ups/tests, diagnosis, and treatment. You also expressed there is a lack of healthcare access in rural areas.

“Better access to neuropsychologists to support sufferers with adjustment to chronic illness and long term pain.”

“Funding for easier access to MRI”

“Medication availability as on a par to the USA”

“Make GP appointments face to face again.”

“Quicker appointments, faster diagnosis, and more routine check ups.”

“It can feel very isolating in rural and semi rural areas. I never really knew how my improvement was going (only by my own self care and positive attitude). This isn't always easy, it would have been beneficial to chat with someone who has knowledge and time”

Education for health professionals

You pointed out it is important to have education and training for health professionals. You want them to better understand neurological conditions so that they can provide better treatment and reduce feelings of stigma.

“GP's to have a more enhanced understanding of the condition and how to manage it.”

“Better education for both patients and GPs generally so that patients can know the treatment they are having is correct and so that GPs can signpost effectively.”

“More training for GP's and neuro and non-neuro specialists”

“Better education [for] physios and radiology triage”

“Spend more time to train people in this specialist field... to stop the ignorance of this condition and bring it to the forefront. Just because it can not be seen doesn't mean it does not exist...stop the stigma and help”

Update outdated guidelines

You wanted outdated guidelines to be revamped, be up to date with current research. You also want other treatment options to be considered.

“Keep up to date with the Mayo Clinic, the NHS is out of date.”

“Up to date information on NICE”

“To consider opioid therapy when all other drugs have been tried, like they do in the US.”

Increase number of healthcare professionals

You also wanted the number of healthcare professionals to be increased. This includes specialist nurses, occupational therapists, physiotherapists, and neurologists. You also mentioned that the number of social care workers should be increased.

“More specialist nurses”

“Make sure enough neurologists with enough time & expertise”

“Appoint more doctors and nurses”

“Increase the number of specialist... Funding for specialist physio and occupational therapist.”

More fundings and investments

You also explicitly suggested more funding should be invested into the health and social care system.

“Targeted funding for NHS”

“Increasing higher rate tax to raise more funds for NHS”

“Put more investment into GP services to identify stroke indicators and early symptoms, and invest in early vocational rehabilitation interventions for survivors”

“Put money into primary care and community support so that people can get referred quickly and get the support they need.”

Theme 2: More research

You wanted more research for your neurological conditions to be funded and conducted. This includes research into treatment and management options (e.g., alternative treatments and non-invasive treatments), genetics, and medications.

"Fund all recognised treatments with appropriate budgets and research into treatments"

"...increase funding for genetic research"

"Fund specific research into causes, treatments, protocols for diagnosis and treatment"

"Research in to diagnosis and treatment management options."

Theme 3: Provide support

Financial support

You wanted more financial support. The benefit system should be made fairer and more accessible.

"Fatigue is a difficult symptom of lots of neurological conditions but not recognised in PIP assessments. This should be changed."

"Support - both financially and practically - should be available, not all neuro conditions are classed as disabilities and may not qualify for cold weather payments etc. So benefit entitlement should be extended and perhaps vouchers for equipment/warm clothing/food should be provided."

"Stop making the benefit system so adversarial & complicated."

"Education for benefit assessors so we are not constantly made to go through court type hearings after PIP assessors have got so many factors wrong in an assessment. This is truly detrimental to our well being - mental and physical"

"To provide help with transport costs as there are many hospital trips and being over an hour away from my hospital it's very expensive and no buses that would get me there. Costs of heating and food are so high. Extra money for support is needed especially in the winter"

"Include people with disabilities in the entitlement to the £650 payment to help with the cost of living crisis as many people with neurological conditions work which excludes them from financial support"

"Having an independent review of the PIP assessment system to take account of the debilitating nature of neurological conditions."

"To ensure PIP increases with cost of living and importantly not to make this a means tested benefit. I did not choose to finish working at age 59 taking an effective £30k decrease in household incomes. But due to a lifetime of saving and a IHR pension I cannot

claim any means tested benefit which is eroding my savings due to using these to support my living needs and also privately fund physio sessions as the waiting time in the NHS is far too long. Without personal funding my conditions would have deteriorated and I would have required A&E and probable hospital admissions via this route."

Social, legal, and other support

You also wanted Government to support through other ways, such as having social care, infrastructures for rehabilitation, accessible public spaces, legal aid, free medications, support groups, email/helpline, and free medical advice.

"Have accessible hydrotherapy pools for adults and children near where they live"

"Provide legal aid and free medication for suffers which these conditions as medication is expensive"

"More attention towards the aftercare and the mental health of the patients is fundamental as it's non existent at the moment."

"Improved access to social care..."

"Have a helpline / email for my condition so I can get a quick question answered without having to wait months for an appointment"

"Support groups especially following a new diagnoses. I was give a link from the consultant to find out more about the condition when diagnosed. You are not in the right place to understand or process the information"

"Provide free medical advice and prescriptions to help us in attempting to live a normal life."

Theme 4: Recognise neurological conditions

Raise awareness about neurological conditions

You want Government to raise awareness about your condition(s) to create an environment with understanding healthcare professionals without stigmas and ignorance. Neurological conditions should be recognised by doctors, but also be acknowledged in work places.

“Giving neurology and neuro conditions a much higher profile than it already has. Recognise that neurological conditions can affect anyone at any age and they're not confined to the elderly or to mental health; more often than not they have nothing to do with geriatrics or psychiatry”

“acknowledge that it is NOT a psychological condition.”

“Train doctors to recognise my condition.”

“They should be more understandin[g] how it impacts on ones life when you get many sleepless nights which makes one very depressed to the point of what is the point of living”

“By making GP's more aware of these conditions and making them aware of the Consultants who treat them”

“Make it easier to work, for example ensuring employers make reasonable adjustments and use disability leave rather than the punitive “3 strikes and you're out” sickness policies as a blanket policy for all employees despite knowing of debilitating conditions”

Listen to people with lived experiences

You think the government should listen more to people with lived experience of neurological conditions and include their voices in policies and decisions.

“The Government needs to listen to the personal experiences of people living with neurological conditions along with their families and carers. The reality of living with a condition is not as it's written in text books or vocalised in lectures. The understanding of living with a neurological condition for Health and Care Professionals must begin early in education and those affected must contribute to the creation of educational materials and services.”

“The Government needs to hear the experiences of those who are living with neurological conditions and the impact neurological conditions affect their day to day lives.”

“need to fully commit to major investment with visible and measurable improvements in ALL areas identified in the My Neuro Survey. Those living with neurological conditions must be consulted every step of the way.”

Recognise Restless Leg Syndrome (RLS)

Trigger warning: reference to suicide

Some of you also expressed explicitly that RLS should be acknowledged more. This includes raising awareness about it, including this condition in medical training, updating guidelines about its treatment, and conducting more research.

"Restless Legs is poorly understood by most GPs, and treatments are varied. Doctors need to be aware of how my condition affects life radically. It's so poorly understood that many are living with it with little help or support. Training should be given to doctors, and money spent on research for this horrible illness"

"Ensure that RLS is included in the training schedule for GPs. There is no one in my Gp practice that knows about what to prescribe or how to help...I had to suggest a medication I had read about on a RLS support group on the internet...I sent him a link to the research being done in Europe and America which states that Pramipexole should no longer be the first port of call anymore and which medications could be prescribed he said it was not relevant because it wasn't UK research. RLS ruins lives and marriages"

"In my case, ensure that GPs learn about RLS, and ensure that NICE updates its procedures for dealing with it. What they are currently stipulating will make the condition worse in the majority of cases. Please note, I had to diagnose myself, and had a hard time educating my GP into giving me the treatment that research has found to be the most suitable."

"Train the medical profession in RLS. It isn't taught at medical school or during GP or neurological training. Most patients now have more expert knowledge than their doctors. RLS UK campaign to get it taught was rejected. Doctors in UK are over prescribing dopaminergic drugs and refusing blood tests. They don't recognise common complication of Dopaminergic drugs and give no help to patients trying to withdraw. World experts have stopped prescribing dopamine agonists yet the UK NICE and NHS guidelines still recommend them."

"Why are doctors not trained to know about it and can actually cause more damage. I don't feel my illness is taken seriously, and have become very depressed as a result, even to the point of ending it all... Please can more attention be given to training and research of this condition before more people have to suffer.."

Quantitative Data - Medical appointments

Access to medical appointments in the last 8 weeks

Figure 2: The number of respondents that reported that they have had a medical appointment in the last 8 weeks.

Table 1: The number of respondents that reported that they have had a medical appointment in the last 8 weeks.

Access	Respondents	Percentage
Yes	170	68.55
No	77	31.05

Number of medical appointments in the last 8 weeks.

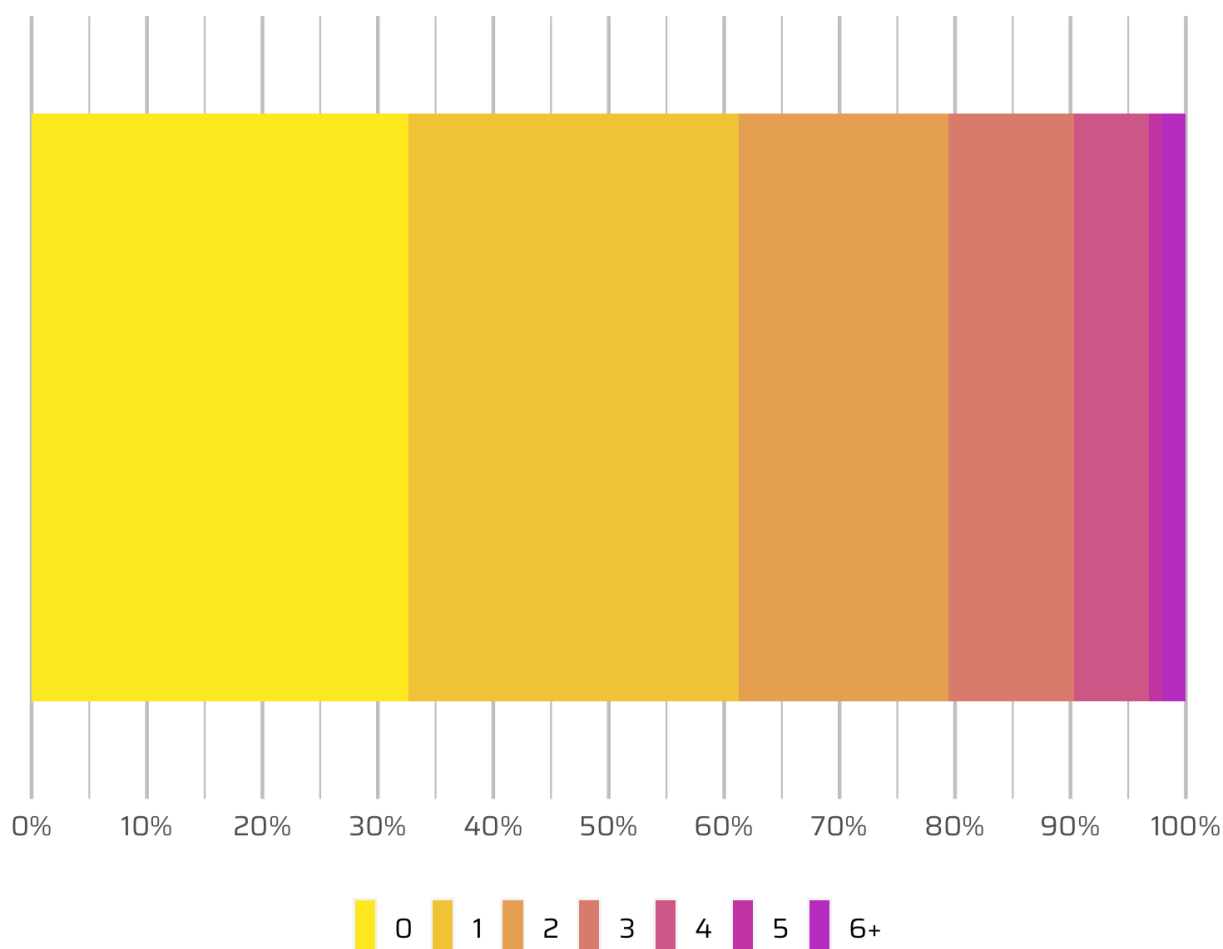

Figure 3: Number of medical appointments in the last 8 weeks.

Table 2: Number of medical appointments in the last 8 weeks.

Number	Respondents	Percentage
6+	5	2.02
5	3	1.21
4	16	6.45
3	27	10.89
2	45	18.15
1	71	28.63
0	81	32.66

Nota bene: The basis for the percentages in this section is the number of observations as opposed to the number of respondents. A single respondent may have had multiple medical appointments and thus multiple observations.

Demographics

Sample size

Total number of respondents: 248

Neurological conditions

Nota bene: A single respondent may have multiple neurological conditions, therefore for this analysis the number of respondents per condition do not add up to the total number of respondents and the percentages do not add up to 100%.

A total of 139 respondents, equating to 56% of respondents, indicated that they have multiple (i.e., more than one) neurological conditions. In total, there are 72 conditions reported.

NB: 7 respondents did not provide a UK-based postcode (or did not provide one) and are hence not included in this map and table.

Employment status

Figure 38: Employment status of respondents.

Table 37: Employment status of respondents.

Employment Status	Respondents	Percentage
Employed (full time)	24	9.68
Employed (part time)	17	6.85
Homemaker	6	2.42
Other	5	2.02
Out of work	7	2.82
Prefer not to say	0	0.00
Retired	86	34.68
Self-employed (full time)	5	2.02
Self-employed (part time)	10	4.03
Student	0	0.00
Unable to work	88	35.48

Number of dependents

Figure 39: Number of dependents of respondents.

Table 38: Number of dependents of respondents.

Dependents	Respondents	Percentage
0	174	70.16
1	51	20.56
2	15	6.05
3+	8	3.23

Receiving care or support

Figure 40: Number of respondents that receive care and support.

Table 39: Number of respondents that receive care and support.

Home care/support	Respondents	Percentage
No	128	51.61
No but I would like this	34	13.71
Yes and I do not pay	36	14.52
Yes and I pay for this	26	10.48
Not applicable	24	9.68

Appendix A – Survey Questions

Question	Response options		
Are you filling in this questionnaire for yourself?	Yes	No	
Which year were you diagnosed with your primary neurological condition?	Free text		
About your condition(s)			
Which year were you diagnosed with your primary neurological condition?	Free text		
Please tell us your first neurological condition and/or symptom you have.	See Appendix B for a list of conditions and symptoms		
Do you have any other neurological condition(s) and/or symptoms you would like to add?	Yes	No	
Please tell us a second neurological condition and/or symptom you have.	See Appendix B for a list of conditions and symptoms		
Do you have any other neurological condition(s) and/or symptoms you would like to add?	Yes	No	
Please tell us a third neurological condition and/or symptom you have.	See Appendix B for a list of conditions and symptoms		
Do you have any other neurological condition(s) and/or symptoms you would like to add?	Yes	No	
Please tell us a fourth neurological condition and/or symptom you have.	See Appendix B for a list of conditions and symptoms		
Do you have any other neurological condition(s) and/or symptoms you would like to add?	Yes	No	

Please tell us a fifth neurological condition and/or symptom you have.	See Appendix B for a list of conditions and symptoms			
Do you have any other neurological condition(s) and/or symptoms you would like to add?	Yes	No		
Please tell us a sixth neurological condition and/or symptom you have.	See Appendix B for a list of conditions and symptoms			
Do you live with conditions other than your neurological condition(s)? If so, how many:	None	1	2	3
	4	5	6+	
What can be done?				
In your opinion, how could the UK Government show it is committed to improving the lives of people affected by neurological conditions?	Free text			
About your recent experiences of treatment and support.				
Overall, how would you describe your experience of health or care in the last eight weeks?	Very good	Good	Average	Poor
	Very Poor	N/A		
How many times have you sought A&E/emergency support from the NHS as a result of your neurological condition in the last eight weeks?	None	1-2 times	3-5 times	5 or more times
Have you had any medical appointments (including remote appointments) in the last eight weeks?	Yes	No	Don't Know	
How many medical appointments have you had in the last eight weeks?	0	1	2	3
	4	5	6+	
Who was your first medical appointment with?	Neurologist	Specialist Nurse	Physiotherapist	Speech and Language Therapist
	Occupational Therapist	Psychologist/ Psychiatrist	GP	Social Services

	Neurosurgery	Other AHP	Other	
How was your first medical appointment delivered?	Phone	Videoconference	Via text/WhatsApp	Face to face
	Other			
How helpful was your first medical appointment?	It was helpful	It was not helpful	Don't Know	
Who was your second medical appointment with?	Neurologist	Specialist Nurse	Physiotherapist	Speech and Language Therapist
	Occupational Therapist	Psychologist/ Psychiatrist	GP	Social Services
	Neurosurgery	Other AHP	Other	
How was your second medical appointment delivered?	Phone	Videoconference	Via text/WhatsApp	Face to face
	Other			
How helpful was your second medical appointment?	It was helpful	It was not helpful	Don't Know	
Who was your third medical appointment with?	Neurologist	Specialist Nurse	Physiotherapist	Speech and Language Therapist
	Occupational Therapist	Psychologist/ Psychiatrist	GP	Social Services
	Neurosurgery	Other AHP	Other	
How was your third medical appointment delivered?	Phone	Videoconference	Via text/WhatsApp	Face to face
	Other			
How helpful was your third medical appointment?	It was helpful	It was not helpful	Don't Know	
Who was your fourth medical appointment with?	Neurologist	Specialist Nurse	Physiotherapist	Speech and Language Therapist
	Occupational Therapist	Psychologist/ Psychiatrist	GP	Social Services
	Neurosurgery	Other AHP	Other	
How was your fourth medical appointment delivered?	Phone	Videoconference	Via text/WhatsApp	Face to face
	Other			
How helpful was your fourth medical appointment?	It was helpful	It was not helpful	Don't Know	

Who was your fifth medical appointment with?	Neurologist	Specialist Nurse	Physiotherapist	Speech and Language Therapist
	Occupational Therapist	Psychologist/ Psychiatrist	GP	Social Services
	Neurosurgery	Other AHP	Other	
How was your fifth medical appointment delivered?	Phone	Videoconference	Via text/WhatsApp	Face to face
	Other			
How helpful was your fifth medical appointment?	It was helpful	It was not helpful	Don't Know	
Who was your sixth medical appointment with?	Neurologist	Specialist Nurse	Physiotherapist	Speech and Language Therapist
	Occupational Therapist	Psychologist/ Psychiatrist	GP	Social Services
	Neurosurgery	Other AHP	Other	
How was your sixth medical appointment delivered?	Phone	Videoconference	Via text/WhatsApp	Face to face
	Other			
How helpful was your sixth medical appointment?	It was helpful	It was not helpful	Don't Know	
To what extent do you feel your mental wellbeing needs are being met?	To a great extent	To a moderate extent	To a small extent	Not at all
	Don't Know			
Which of the following describes how you feel at the moment?	Calm	Well supported	Anxious	Hopeless
	Lonely			
About you				
What year were you born?	Free text			
To which of these ethnic groups do you belong?	White British	White Irish	Any other White background	White and Black Caribbean
	White and Asian	Any other mixed background	Indian	Pakistani
	Bangladeshi	Any other Asian background	Caribbean	African

	Any other Black background	Chinese	Any other ethnic background	
What is your gender?	Male	Female	Prefer to self-describe	Prefer not to say
What is your sexual orientation?	Aromantic	Asexual	Bisexual	Gay man
	Gay woman/lesbian	Pansexual	Queer	Straight (heterosexual)
	Prefer not to say	Other		
What best describes your employment status?	Employed (full time)	Employed (part time)	Self-employed (full-time)	Self-employed (part-time)
	Homemaker	Student	Out of work	Unable to work
	Retired	Prefer not to say	Other	
How many dependents live with you?	1	2	3	4
	5	6+		
Do you receive any care or support at home for your day-to-day life?	Yes and I pay for this	Yes and I do not pay	No but I would like this	No
	Not applicable			
Communicating with you.				
What is your first name?	Free text			
What is your surname?	Free text			
What is your Email Address?	Free text			
What is the first line of your address?	Free text			
What is your postcode?	Free text			

Appendix B – List of Neurological Symptoms & Conditions

Acquired brain injury	Hemicranial Corrina	Stroke/TIA
Acute poliomyelitis	Hemiplegia	Subacute sclerosing panencephalitis
ADHD	Hereditary Spastic Paralegia	Subarachnoid hemorrhage
Agnosia	Huntington's disease	Syringomyelia and syringobulbia
Amoebic brain abscess	Hydrocephalus	Tarlov Cysts
Apraxia	Hydromyelia	Tethered Cord
Arnold-Chiari syndrome	Intracranial hypertension	Tourette Syndrome
Arteriovenous Malformation	Intracranial abscess and granuloma	Toxic encephalopathy
Ataxia	Intracranial and intraspinal abscess and granuloma in diseases classified elsewhere	Toxoplasma meningoencephalitis
Bell's palsy	Intracranial and intraspinal phlebitis and thrombophlebitis	Transverse myelitis
Bipolar	Intracranial and intraspinal phlebitis and thrombophlebitis	Traumatic Brain Injury
Brain or spine tumour	Intraspinal abscess and granuloma	Tremor
Brown-Séquard syndrome	Kennedy's disease	Trigeminal neuralgia
Cauda Equina Syndrome	Leukoencephalitis	Tuberculous meningitis
Cavernoma	Long COVID	Vascular myelopathies
Cerebral Aneurysms (Ruptured/Unruptured)	Malaria	Waiting for a diagnosis
Cerebral cysts	Melkersson's syndrome	Postzoster neuralgia
Cerebrospinal fluid leak	Meningeal tuberculoma	Progressive multifocal leukoencephalopathy
Cervical stenosis	Meningitis	Rabies

Chagas' disease	Migraine	Radiculopathy
Charcot-Marie-Tooth Disease	Motor neurone disease	Rare and other neurological diseases
Chiari Malformation	Multiple sclerosis	Rare and other neurological diseases
Chronic fatigue syndrome	Multiple system atrophy	Refsum's Disease
Clonic hemifacial spasm	Muscular dystrophy	Restless Leg Syndrome
Cranial nerve disorder	Myalgic encephalomyelitis (ME)	Short Fibre Neuropathy
Creutzfeldt-Jakob disease	Myasthenia Gravis	Spina Bifida
Cysticercosis of central nervous system	Mycoses	Spinal cord injury
Dementia	Myelopathy	Spinal muscular atrophy
Demyelinating disease	Myopathy	Split Cord
Disorder of visual pathways	Myositis	Spondylosis
Disorders of hypoglossal nerve	Myotonic disorders	Stroke/TIA
Disorders of multiple cranial nerves	Narcolepsy and cataplexy	Subacute sclerosing panencephalitis
Disorders of olfactory nerve	Nerve palsy	Subarachnoid hemorrhage
Disorders of optic chiasm	Nerve Tumour	Syringomyelia and syringobulbia
Disorders of other specified cranial nerves	Neurofibromatosis	Tarlov Cysts
Disorders of other visual pathways	Neuromyelitis optica	Tethered Cord
Disorders of vagus nerve	Neuropathy	Tourette Syndrome
Disorders of visual cortex	No diagnosis	Toxic encephalopathy
Down's Syndrome	Optic atrophy	Toxoplasma meningoencephalitis
Dysarthria and anarthria	Papilloedema	Transverse myelitis
Dyslexia and alexia	Paraplegia and tetraplegia	Traumatic Brain Injury
Dysphasia and aphasia	Parkinsonism	Tremor
Dystonia	Post-polio syndrome	Trigeminal neuralgia
Eaton-Lambert syndrome	Postzoster neuralgia	Tuberculous meningitis

Ehlers Danlos Syndromes	Progressive multifocal leukoencephalopathy	Vascular myelopathies
Encephalitis	Rabies	Waiting for a diagnosis
Epidemic vertigo	Radiculopathy	Tourette Syndrome
Epilepsy	Rare and other neurological diseases	Toxic encephalopathy
Extradural and subdural abscess	Rare and other neurological diseases	Toxoplasma meningoencephalitis
Extrapyramidal disorder	Refsum's Disease	Transverse myelitis
Facial myokymia	Restless Leg Syndrome	Traumatic Brain Injury
Faetal Alcohol Spectrum Disorders (FASD)	Short Fibre Neuropathy	Tremor
Fibromyalgia	Spina Bifida	Trigeminal neuralgia
Functional Neurological Disorder	Spinal cord injury	Tuberculous meningitis
Geniculate ganglionitis	Spinal muscular atrophy	Vascular myelopathies
Guillain-Barre syndrome	Split Cord	Waiting for a diagnosis
Headache	Spondylosis
